### **Chernobyl english subtitles episode 3**

In the latest episode of Chernobyl, plant workers Ananenko (Baltasar Kormákur), Bezelov (Philip Barantini) and Baranov (Oscar Isaac) volunteers spotted and turned the valve sluice valve into water pump in some of the nuclear plant's tanks. Now they're flames of shaded water, clicking dosimeters and using less than floppy trust. Fortunately they managed to turn the pipes, but the crisis is not over. In fact, part of the problem is whether Russia can adequately adequate the issue. When Lyudmila Ignatenko (Jessie Buckley) shows up to see her firefighter husband Vasily (Adam Nagaitis), it gets a pass after annoying people in office. Then when he teases him, he receives no proper protection. Meanwhile, Soviet nuclear strategy Valery Legasov (Jared Harris) is critical of evacuation procedures. Due to a spike in zirconium-95, meltdown began, which means things are getting worse. May 2, 1986 More from Show SnobSoon. Board of Deputy Presidents' Minister Boris Shcherbina (Stellan Skarsgård) is called Mikhail Gorbachev (David Denchuk). Unfortunately, the news is not good. The situation at the core is deteriorating and a full meltdown would break the Pripyat River. The solution? All nitrogen liquids must be found in the Soviet Union. Shortly afterwards, Shcherbina takes a walk with Legasov. At first it seems like an argument will ensue, but Shcherbina shows his human side, asking Legasov what will happen to people exposed to radiation. Legasov says that he tears in the eyes of our cellular structures apart. Even after it seems some may recover, the damage may manifest later. The bride's bones die, there will be decommissioning of organs and tissue, and overturning with the open vessels such as fever. Indeed, Chernobyl gives a good glimpse to what this looks and feels like, and it's not pretty. Two things also become clear: (1) Legasov and Shcherbina may take cancer or other fatal affects; (2) The government looked at them. Investigation and sacrifice CHORNBYL' UKRAINE - AUGUST 19: A visitor looks at a monument to firefighters who respond to the 1986 reactor explosion not far from the Chernobyl nuclear power plant on August 19, 2017 in Chernobyl, Ukraine. On April 26, 1986 reactor number four exploded after a safety test went wrong, spread radiation over thousands of square kilometers in different directions. The nearby Pripyat city, which has an approximation population of 40,000 and the homes of plant workers and their families, has been evacuated and has been abandoned ever since. Today tourists often visit the city on specially organized trips to Kiev. (Photo by Sean Gallup/Getty Images) Legasov meets with Ulana Khomyuk (a composite character played by Emily Watson). Like others, reading the basic question was even possible. At his request for the truth, Khomyuk first meets engineer Chernobyl engineer Anatoly Dialov (Paul Ritter), who refuses to speak. Meanwhile, Coal's Minister Mikhail Shchadov (Michael Colgan) meet with Glukhov (Alex Farnsworth), a mining crew chief. At first Glukhov resisted his marching order, he said We do not leave unless we know why. They were told about their need to prevent disaster pollution from the River Pripyat. Mine they agreed to the mission, but all did not suit Shchadov's way past, fit it with coal. Their task is to help install a liquid heat liquid exchange under a concrete pad. It must be accessible from under tea. If that's not enough, they can't use heavy machinery and be dug by hand! Given the limited time they have, Glukhov Wiseman insists they start immediately. It's pretty hell dug into the mines, especially when officials deny the Glukhov request for fans (as they would re-circulate toxic dust). Eventually, miners work with little to no clothes, just to avoid the heat May 6, 1986 Khomyuk next talks with Senior Engineer Tropunov (Robert Emms), who has nose bleeding as he speaks. He asked him why there was not an emergency closed immediately after the disaster struck. Tropunov insists that they made pressing the emergency button, as supervisor Aleksandr Akimov (Sam Troughton). After making these two questions, she was found arrested after threatening to publish that Miss Ignatenko - who is pregnant - was in the hospital with no protective gear! Action Drastik! Another meeting, Legasov details the problem of radioactive debris, and how evacuation needs to happen. Also, because everything will have radionuclides, they will have to kill many animals, battered forests and built a structure containing the exposed core itself. It highlights that thousands will die. Shortly afterwards, Legasov confronted KGB President Viktor Charkov (Alan Williams) about Khomyuk's testing. Charkov agrees to read freely, highlighting the Russian philosophy of trust but audit. Next Society: Things we want (and don't want) to see in Season 2 Khomyuk verify that Tropunov and Akimov have done everything right, so the mystery remains: What caused the Chernobyl Core Explosion? Meanwhile, as minors searched, Ms. Ignatenko attended her husband's funeral, where her lead coffin is buried under cement in a mass grave of first responders. What are your thoughts on Chernobyl? Let us know in the comments! Valery creates a detailed plan to decontaminate Chernobyl: Lyudmila ignored warnings about her husband's firefighter Mr. Contamination.
