Moderately effective up to 100 m (110 yd), with a probability of hitting the target of 1.3 square meters (0.12 m²) in human size by around 10%. (1,200 m) providing 58 foot-kilos per second ... Read ArticleTube Laser Cutting - YouTubeTube laser cut round, square, aluminum alloys eliminate traditional saw and drilling processes and carbon steels are the most common. We process thicknesses up to 1/2, but normally the weight of the material per foot is the limiting factor for the machine. For more ... Watch Video EXTENDED METAL & GRATING - Alro SteelEXPANDED METAL & GRATING EXPANDED METAL SHEETS Catwalk and Structural Grill products are determined by the weight of the finished product per square meter. Lbs. Per Sq. Ft. Standard Sheet Size (ft) WIDTH SWD Length LWD Design Size (inches) ... Get DocRoofing Ingredients Basics - About.com a better choice than homegalvanized sheet. After the metal hosts experienced the pain of loading, and the roofers. Also, fake slate deals with one of the big problems with real slate - overweight. Other roofing materials are now available to meet ceramic ... Article Home/ / Stock List / / Aluminum Sheet Aluminum Specifications in various forms 1100-0 (It has a yield power per square inch of about 5000 lbs) are stocked in a strong array of these Properties varying from 7075-T6 (yield power per inch to about 70,000 lbs). Here are several typical applications in the range of these features - Utility Sheet, flashing, duct, lining walls, etc. used for all general sheet metal works such as 1100-0 primarily used for yarn and deep drawing processes kitchen utensils, ornaments, etc. 1100-H14 and 3003-H14 features used for general forming processes are alloys. The physical properties of the 5005-H14 3003-H14 are similar to superior corrosion resistance and homogeneous smooth surface coating suitable for anodizing. It is suitable for alloy curtain walls, decorative flooring, control panel boxes and markings, etc. 5052-H32 and H34 good forming qualities are suitable for superior power alloy and especially marine applications. 5083-H321 and H323 are a different tempered alloy that produces high weld joint efficiency. It is a sister alloy from 5454-H32 to 5083 with a lower grade to stress corrosion when working in the range of 150°F to 300°F. Typical uses include truck dumps, tanker trucks, 6061-T6 has excellent all-purpose alloy, high strength and good corrosion resistance, such as stacks, chemical transport tanks on ships, etc. It is used in all structural applications such as mining cars, logging and shipbuilding. Painted Aluminum: 1100, 3003, 3105, 5005 and 5052 are just some of the common alloys found in the painted product. Painted aluminum mechanical properties are produced in a wide range and finishes spectrum high durability includes exterior coatings, special epoxies, polyesters, textured polyesters, fluorocarbons and metallic as well as wash coat lining. Standard colors can be selected or custom color matching specifications can be made. Most coatings are available on one and two sides.
